## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5- 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "second layers" in line 7 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim 7 recites the limitation "the microstrip line" in line 5 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim 8 recites the limitation "said grounding metallic layers" in line 5 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim 9 recites the limitations "said plurality of other dielectric substrates, said both sided two layer dielectric substrate, said support plate" in lines 2, 4,7 and 8. There is insufficient antecedent basis for this limitation in the claim.

Claim 9 discloses a metal plate in line 8 of the claim, and then further discloses a metal plate in line 9. Is this the same metal plate or a different metal plate?

Claim 9 also discloses a hard organic substrate in line 10 of the claim, and then further discloses a hard organic substrate in lines 11 and 12. Is this the same hard organic substrate or a different organic substrate?

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Fathy et al US Patent 6,320,547.

Fathy et al disclose a RF circuit parts are mounted on both sides of a multilayer dielectric substrate (502 506), and transmission lines (514) connecting said RF circuit parts (508 510 512) on both sides are constructed by a group of vias having a periodical structure or vias having a coaxial structure extended in the direction perpendicular to the face of said multilayer dielectric substrate. The via having the coaxial structure is formed by a center conductor 820 and a cylindrical conductor 822 surrounding said center conductor 820 and connected to a grounding conductive layer (814 808) provided in said multilayer dielectric substrate. A high frequency circuit part 508 provided on one of the faces of said multilayer dielectric substrate is an antenna. (Figures 5 7 and 8 and column 8 line 48 through column 11 line 61)

*Allowable Subject Matter*

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 10-12 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

With regards to claim 2, the prior art does not disclose or fairly teach the vias having the periodical structure constructed so that a plurality of vias are distributed around the center conductor at a interval equal to or smaller than  $\frac{1}{4}$  of the wavelength of the signal of the transmission line. With regard to claim 10, the prior art of record does not disclose or fairly teach the circuit wherein the RF circuit part includes a oscillation circuit, a power amplifier for amplifying the output of the oscillation circuit and a mixer.

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Greenman et al US Patent 5,83,598 and Tserng et al US Patent 5,521,406.
